

WHAT IS CLAIMED IS:

1. A method for organizing the free flow of information during a consultation on a case, comprising:

organizing the free flow of information obtained through the communication according to a plurality of levels, including at least one general level and one specific level;

recommending at least one solution;

checking said at least one solution against the free flow of information and said organized information; and

optionally indicating at least one feature of the case that is not suitable for said at least one solution.

2. The method of claim 1, wherein the method is suitable for medical practice (in which the case is a patient), legal practice (in which the case could be a legal or court case, a patent application, a trademark application, a legal opinion and so forth), professional consulting such as for architecture (in which the case could be a building to be built or modified), psychological counseling and education, or any kind of free flowing information that is to be sorted.

3. The method of claim 1, further comprising:

assisting with follow-up and long term management of a case.

4. A method for assisting a homoeopathic practitioner with a patient, comprising:

- performing case taking with the patient to receive information about the symptoms;
- organizing the symptoms according to a pre-analysis;
- specifying an essence of a condition of the patient according to said organized symptoms; and
- displaying a plurality of rubrics according to said essence of said condition.

5. The method of claim 4, further comprising:

- grouping said rubrics according to said essence of said condition and the symptoms;
- choosing at least one remedy; and
- comparing said at least one remedy to said essence of said condition and the symptoms.

6. The method of claim 5, further comprising:

- justifying a selection of said at least one remedy according to said essence of said condition and the symptoms.

7. The method of claim 6, further comprising:

- diagnosing an acute condition, a chronic condition and an epidemic; and
- examining a selected remedy to determine suitability for acute and chronic

conditions and/or epidemics.

8. The method of claim 7, further comprising:
analyzing further information provided by the patient in a follow-up visit.

9. The method of claim 8, further comprising:
selecting a new remedy according to said further information; and
comparing said new remedy to said remedy being previously selected.

10. The method of claim 5, further comprising:
selecting a potency of said remedy according to at least one rule.

11. The method of claim 5, wherein said comparing is performed according to
analysis of information from a plurality of different practitioners.

12. The method of claim 11, further comprising:
providing feedback according to said analysis.

13. The method of claim 12, wherein said feedback includes teaching
information for a student practitioner.

14. The method of claim 4, further comprising:

providing feedback to the practitioner about said essence of said condition.

15. The method of claim 14, wherein said feedback is based upon statistical analysis of information from a plurality of previous consultations with different patients.

16. The method of claim 15, wherein said previous consultations are from different practitioners.

17. The method of claim 4, further comprising:
providing a dictionary for automatic word completion of at least one word at least during said case taking.

18. The method of claim 4, wherein said case taking further comprises using at least one graphical tool for manipulating at least one word.

19. The method of claim 4, wherein said organizing the symptoms further comprises tagging symptoms for correlation between said organizing and at least one stage of analyzing, selecting a remedy or selecting a potency.
